

Brand New - A Mopec Exclusive - Patent Pending C-Series Wall Mounted Autopsy Sink

Available in left, right or center approach - left pictured below

The C-Series Wall Mounted Elevating Autopsy sink was designed to provide an adjustable working area ergonomically correct for users (people) of various heights. A 5' 4" technician is just as comfortable using this autopsy sink as a 6'4" technician. No more crowded labs filled with various size sinks when this one can accommodate all sizes, saving both space and money.

The sink is surface mounted and can be recessed within the thickness of the wall. When in the lowered position, procedures can be comfortably accomplished from a sitting position as if sitting at a desk. When raised, the procedure would be accomplished as if sitting on a lab type stool. Adjustability of the C Series allows all technicians whether sitting or standing, to make adjustments to bring the work to their exact desired position and comfort, regardless of height with the flip of a switch. The users have the ability to raise and lower the unit within the procedure.

The C-Series Wall Mounted Elevating Autopsy Sink provides all of the features on a typical pedestal type autopsy table without the space requirements. The autopsy cart overhangs the autopsy station allowing fluids to drain directly into the sink. Removable and interchangeable grid plates.

The dissection area has grid plates which are elevated above a sloped surface that drain directly into the sink. Elevated design allows for easy floor cleaning and a more sanitized workspace. The autopsy sink is delivered fully plumbed and wired ready for installation.
